

# DST-52 STEALTH

## GPS - Tracking and Asset Recovery System

You can't afford to lose assets, but you need a solution that will do an effective job in helping you to recover high value property? Now you can get it using new compact standalone DST-52 Stealth GPS tracking system designed for covert installation to the vehicle in order to locate it when it's stolen.

This system has many advantages over other recovery and tracking devices. It is not the full-featured alarm system – DST 52 is a retrieval device that can be used either independently or in addition to standard car - alarm system.

The operating principle is simple – a GPS/GSM module installed to the vehicle remains in deep sleep mode most of the time. The module wakes up according to the user pre-defined schedule and transmits all the recently acquired coordinates to the owner's mobile phone using SMS and GPRS channel. It also can be remotely reconfigured through special format service SMS messages.

The main advantages of this tracking system are:

- Tiny dimensions and a special deep sleep mode that makes this device impossible for intruders to be found and disabled.
- Unique operating algorithm that enables the owner to track the vehicle locations over a certain period of time with pre-defined coordinates storing schedule (“blackbox”). It means the device is “waking up” at the certain time and tries to acquire coordinates from GPS receiver. The frequency of data acquisition is user-defined. The coordinates are saved in the device memory and transmitted as scheduled only when satellite fix was successful. Thus, you can get the actual device position and receive the recent vehicle movement track as well.
- Built-in batteries intended for 1 year of off-line operation and unique algorithm of module recharging don't let the hijacker to detect the presence of the device due to extra low power consumption.
- Simplicity of installation – only power source is connected to device terminals. Device also can operate from the built-in accumulator without external power source, so the absence of lead wires complicates the search of the hidden device.
- Powerful built-in GSM antenna, that allows to hide the module not only in classic places of installation but also in any water and mud protected place in the vehicle. It considerably complicates the search of the device and facilitates installation.

The DST-52 Stolen Vehicle Recovery System gives you a better than 90 percent chance of recovering your car quickly and with less damage. Whether it's your classic car, family vehicle, or any other movable asset (container or cargo), DST-52 Stealth lets you know the exact whereabouts of what is important to you.
