

DTK-53 Automotive GPS - tracker

Your business needs a cost-effective and easy-to-use commercial vehicle monitoring solution? All your fleet tracking requirements can be met with the new DTK-53 GPS-tracker.

DTK-53 is a compact, durable and highly sensitive tracking system based on GPS/GPRS technology. It works with most types of temperature, space, motion and fuel-level sensors reporting on all system events and intrusion attempts.

Detailed tracking maps and reports can be easily generated with the user-friendly GPS-tracking software. A full reporting suite lets you download and review reports on mileage, speed, time of arrival/departure at a site and time spent at sites so you can better schedule jobs and improve efficiency.

System features:

- Objects location using built-in GPS module;
- GSM tracking facility while GPS data are not available;
- On-line monitoring and ability to control of the car systems and elements remotely from the owner's mobile phone;
- Real-time position reports through GSM/GPRS;
- Voice and/or SMS alerts in case of intrusion;
- Plugged-in active microphone;
- On-board flash storage for positioning logging ("black box" feature);
- Integrated Li-Ion battery;
- Compatibility with Orange GPS-Trace free web-tracking service.

Designed to cut costs, increase workforce productivity, improve customer service and stop wasteful driving habits, DTK-53 will provide you with innovative, affordable solutions for managing mobile resources, vehicle fleet and cargo over the internet.
